PACE

APPROPRIATE EFFORT FOR THE JOB

Why should formatting a note need the same effort as reconciling conflicting evidence? PACE is the PIA design for matching resources to the job while keeping the required quality and permissions.

Start with the outcome

Consider the task, its complexity, the consequence of an error and the evidence needed. Prompt length alone does not determine the required effort.

Preserve the required standard

Quality, privacy, safety and authority requirements come before cost optimisation. A cheaper route is suitable only when it meets the job's requirements.

Use effort where it helps

Reuse valid work, avoid unnecessary repetition and recognise when progress depends on an external input. More activity is not automatically a better result.

Keep cost understandable

The design uses bounded budgets, retries and escalation. Material changes to scope, provider conditions or cost require the applicable authority.

DEVELOPMENT STATUS

PACE is being developed to match computing effort to the task. These examples explain the approach; they are not performance benchmarks or savings guarantees.

PRODUCT PREVIEW

One Pia with proportionate support

SAME PIA. YOUR PERMISSIONS PRESERVED.

The customer should be able to explain the job without managing model sliders or choosing a different Pia personality.

A routine job

Formatting an existing note may call for a straightforward route and basic validation. Extra processing should have a reason.

A more involved job

Reconciling several sources may need deeper reasoning, explicit assumptions and stronger checks. The effort follows the actual work.

A consequential job

A privacy, permission or release decision retains its required controls. PACE cannot grant access, approve spending or override a hold.

When a route is insufficient

The design calls for bounded retry, a suitable authorised alternative or a truthful pause. It does not permit silent quality reduction or indefinite spending.

Next step: describe the result you need, the evidence that matters and any relevant deadline or cost limit. No saving percentage, speed multiplier or automatic discount is promised. Current charges belong in the separate approved schedule.

QUALITY AND CONTROL

The approach keeps quality, privacy, safety and permissions central. Available functions and charges will be explained with the released service.
